Directions : Read the following passage and answer the questions given after it.

Sustainable development is the concept of meeting the needs of the present without compromising the ability of future generations to meet their own needs. It is a holistic approach that integrates economic, social, and environmental dimensions to ensure long-term well-being for both current and future generations. The concept gained prominence in the 1987 Brundtland Report, which defined sustainable development as development that meets the needs of the present without compromising the ability of future generations to meet their own needs. The 17 Sustainable Development Goals (SDGs) adopted by the United Nations serve as a global blueprint for achieving this end, covering areas like poverty, hunger, health, education, gender equality, clean energy, and climate action.

Education plays a crucial role in sustainable development by fostering awareness and critical thinking. It equips individuals with the knowledge and skills to make informed decisions and adopt sustainable practices. Education also promotes social cohesion and inclusivity, ensuring that no one is left behind in the pursuit of sustainable development. Moreover, it plays a significant role in addressing global challenges such as climate change, poverty, and inequality by promoting innovation and collaboration across different sectors and disciplines.

However, the implementation of sustainable development faces several challenges. One major challenge is the lack of political will and commitment from governments and stakeholders to prioritize sustainable development policies and initiatives. Additionally, there is a lack of awareness and understanding among the general public about the importance of sustainable development and the actions required to achieve it. Overcoming these challenges requires a multifaceted approach that includes education, policy reform, and collaboration between different stakeholders.

In conclusion, sustainable development is a holistic approach that integrates economic, social, and environmental dimensions to ensure long-term well-being for both current and future generations. The concept gained prominence in the 1987 Brundtland Report and is guided by the 17 Sustainable Development Goals adopted by the United Nations. Education plays a crucial role in sustainable development by fostering awareness and critical thinking and promoting social cohesion and inclusivity. However, the implementation of sustainable development faces challenges such as political will and lack of awareness, which require a multifaceted approach that includes education, policy reform, and collaboration between different stakeholders.
