RBI Assistant Prelims 2022 Shift 1 Memory Based Paper

Que. 1–5 Directions:
Read the passage given below and answer the questions that follow.
In recent years, workplaces across the world have begun to recognize the importance of adaptability among employees. With rapid technological change and evolving job roles, the ability to adjust to new circumstances has become a critical skill. Adaptability involves remaining open to learning, responding positively to change, and maintaining productivity even in uncertain situations. Employees who demonstrate adaptability tend to cope better with pressure and are more willing to acquire new competencies. A survey revealed that nearly 38% of professionals feel anxious about keeping their skills relevant, while 42% worry about job security due to automation. However, organizations that encourage continuous learning and provide emotional support help reduce such concerns. Leaders play a crucial role in shaping this environment by modeling flexibility and encouraging experimentation without fear of failure. As machines increasingly handle routine tasks, human roles will demand creativity, judgment, and the ability to respond thoughtfully to change.
