- Ans
- 1. Structures can be designed with laminated wood based on the required strength and low-grade wood can be positioned accordingly.
 - 2. It can be used to fabricate large members that are impossible to be made from solid wood.
 - 3. Individual boards, which are used in laminated wood due to their relative thinness, can be properly dried without checking (cracking) and defects, such as knots, can be removed.
 - 4. Since laminated wood is glued, wood of only large dimensions can be used, which increases the amount of waste.
