	He said, "The machine operated automatically but had malfunctioned that morning."
	He said, "The machine operated automatically but had malfunctioned this morning."
	He said, "The machine operates automatically, but malfunctioned this morning."
	He said, "The machine is operating automatically, but malfunctioned this morning."

Q.No: 11	Which sentence contains a misspelled word?
	The teacher asked the students to annotate the text.
	Please annotate any important points in the article.
[green]	He forgot to anotate the key sections before submitting the paper.
	Use a pencil to annotate your notes neatly.

Q.No: 12 Change the following sentence into the Active form.
The students were made to write a detailed summary of the complex text.

[yellow]	They made the students write a detailed summary of the complex text.
	The students wrote a detailed summary of the complex text.
[red]	They made the students to write a detailed summary of the complex text.
	The students were made that they should write a detailed summary.

Q.No: 13 Select the option that expresses the given sentence in indirect voice.
She said, "I have completed my task."

	She said that she has completed her task.
[green]	She said that she had completed her task.
	She said that I had completed my task.
	She said that I have completed her task.

Q.No: 14 Choose the correct passive voice transformation of the sentence:
Did the renowned author finally release the highly anticipated sequel to his award-winning novel?

[green]	Was the highly anticipated sequel to his award-winning novel finally released by the renowned author?
	Has the highly anticipated sequel to his award-winning novel been finally released by the renowned author?
	Was the highly anticipated sequel to his award-winning novel been released by the renowned author?
	Did the highly anticipated sequel to his award-winning novel be released by the renowned author?

| Q.No: 15 | **Read the passage and answer the following questions:**

Metals are often associated with industrial use and construction, but many of them play a vital role in the human body and are essential for maintaining good health. These bio essential metals, present in small quantities, are involved in crucial physiological functions such as oxygen transport, enzyme activity, and immune response.

Iron, for instance, is a key component of hemoglobin, the protein in red blood cells that carries oxygen throughout the body. A deficiency in iron can lead to anemia, fatigue, and reduced cognitive function. Zinc supports the immune system, aids in wound healing, and is necessary for proper growth and development, especially in children.

Calcium, though more commonly known as a mineral, is technically a metal. It is essential for strong bones and teeth, and also plays a role in muscle contraction and nerve transmission. Similarly, magnesium contributes to over 300 enzyme reactions in the body and supports muscle and nerve function.

Copper aids in the formation of red blood cells and supports cardiovascular health, while selenium, a trace metal, functions as an antioxidant, protecting cells from damage.

However, it is important to note that while these metals are beneficial in small amounts, excessive intake either through supplements or environmental exposure can be toxic.

Maintaining a balanced diet rich in fruits, vegetables, whole grains, and lean proteins typically provides sufficient amounts of these essential metals. Understanding their role highlights the intricate connection between nutrition, chemistry, and overall health.

Choose the correct **negative interrogative form** of the following sentence:

"It is essential for strong bones and teeth, and also plays a role in muscle contraction and nerve transmission."

It isn't essential for strong bones and teeth, and also plays a role in muscle contraction and nerve transmission.

It should not be essential for strong bones and teeth, and also plays a role in muscle contraction and nerve transmission.

Shouldn't it be essential for strong bones and teeth, and also plays a role in muscle contraction and nerve transmission.

Isn't it essential for strong bones and teeth, and doesn't it play a role in muscle contraction and nerve transmission?

Q.No: 16 **Read the passage and answer the following questions:**

Metals are often associated with industrial use and construction, but many of them play a vital role in the human body and are essential for maintaining good health. These bio essential metals, present in small quantities, are involved in crucial physiological functions such as oxygen transport, enzyme activity, and immune response.

Iron, for instance, is a key component of hemoglobin, the protein in red blood cells that carries oxygen throughout the body. A deficiency in iron can lead to anemia, fatigue, and reduced cognitive function. Zinc supports the immune system, aids in wound healing, and is necessary for proper growth and development, especially in children.

Calcium, though more commonly known as a mineral, is technically a metal. It is essential for strong bones and teeth, and also plays a role in muscle contraction and nerve transmission. Similarly, magnesium contributes to over 300 enzyme reactions in the body and supports muscle and nerve function.

Copper aids in the formation of red blood cells and supports cardiovascular health, while selenium, a trace metal, functions as an antioxidant, protecting cells from damage.

However, it is important to note that while these metals are beneficial in small amounts, excessive intake either through supplements or environmental exposure can be toxic.

Maintaining a balanced diet rich in fruits, vegetables, whole grains, and lean proteins typically provides sufficient amounts of these essential metals. Understanding their role highlights the intricate connection between nutrition, chemistry, and overall health.

Choose the correct **interrogative form** of the following sentence:

"Copper aids in the formation of red blood cells."

Do copper aid in the formation of red blood cells?

Is copper aiding in the formation of red blood cells?

Does copper aid in the formation of red blood cells?

Has copper aided in the formation of red blood cells?

Q.No: 17 **Read the passage and answer the following questions:**

Metals are often associated with industrial use and construction, but many of them play a vital role in the human body and are essential for maintaining good health. These bio essential metals, present in small quantities, are involved in crucial physiological functions such as oxygen transport, enzyme activity, and immune response.

Iron, for instance, is a key component of hemoglobin, the protein in red blood cells that carries oxygen throughout the body. A deficiency in iron can lead to anemia, fatigue, and reduced cognitive function. Zinc supports the immune system, aids in wound healing, and is necessary for proper growth and development, especially in children.

Calcium, though more commonly known as a mineral, is technically a metal. It is essential for strong bones and teeth, and also plays a role in muscle contraction and nerve transmission. Similarly, magnesium contributes to over 300 enzyme reactions in the body and supports muscle and nerve function.

Copper aids in the formation of red blood cells and supports cardiovascular health, while selenium, a trace metal, functions as an antioxidant, protecting cells from damage.

However, it is important to note that while these metals are beneficial in small amounts, excessive intake either through supplements or environmental exposure can be toxic.

Maintaining a balanced diet rich in fruits, vegetables, whole grains, and lean proteins typically provides sufficient amounts of these essential metals. Understanding their role highlights the intricate connection between nutrition, chemistry, and overall health.

Read the line from the passage and answer the question:

"Maintaining a balanced diet rich in fruits, vegetables, whole grains, and lean proteins typically provides sufficient amounts of these essential metals."

Which of the following is the most appropriate antonym for "sufficient" as used above?

Inadequate	
Abundant	
Excessive	
Absent	

Q.No: 18 | **Read the passage and answer the following questions:**

Metals are often associated with industrial use and construction, but many of them play a vital role in the human body and are essential for maintaining good health. These bio essential metals, present in small quantities, are involved in crucial physiological functions such as oxygen transport, enzyme activity, and immune response.

Iron, for instance, is a key component of hemoglobin, the protein in red blood cells that carries oxygen throughout the body. A deficiency in iron can lead to anemia, fatigue, and reduced cognitive function. Zinc supports the immune system, aids in wound healing, and is necessary for proper growth and development, especially in children.

Calcium, though more commonly known as a mineral, is technically a metal. It is essential for strong bones and teeth, and also plays a role in muscle contraction and nerve transmission. Similarly, magnesium contributes to over 300 enzyme reactions in the body and supports muscle and nerve function.

Copper aids in the formation of red blood cells and supports cardiovascular health, while selenium, a trace metal, functions as an antioxidant, protecting cells from damage.

However, it is important to note that while these metals are beneficial in small amounts, excessive intake either through supplements or environmental exposure can be toxic.

Maintaining a balanced diet rich in fruits, vegetables, whole grains, and lean proteins typically provides sufficient amounts of these essential metals. Understanding their role highlights the intricate connection between nutrition, chemistry, and overall health.

Which idiom best describes the importance of consuming essential metals in the right amounts, as highlighted in the passage?

	A bitter pill to swallow
	A stitch in time saves nine
	Too much of a good thing
	Every cloud has a silver lining

Q.No: 19 | **Read the passage and answer the following questions:**

Metals are often associated with industrial use and construction, but many of them play a vital role in the human body and are essential for maintaining good health. These bio essential metals, present in small quantities, are involved in crucial physiological functions such as oxygen transport, enzyme activity, and immune response.

Iron, for instance, is a key component of hemoglobin, the protein in red blood cells that carries oxygen throughout the body. A deficiency in iron can lead to anemia, fatigue, and reduced cognitive function. Zinc supports the immune system, aids in wound healing, and is necessary for proper growth and development, especially in children.

Calcium, though more commonly known as a mineral, is technically a metal. It is essential for strong bones and teeth, and also plays a role in muscle contraction and nerve transmission. Similarly, magnesium contributes to over 300 enzyme reactions in the body and supports muscle and nerve function.

Copper aids in the formation of red blood cells and supports cardiovascular health, while selenium, a trace metal, functions as an antioxidant, protecting cells from damage.

However, it is important to note that while these metals are beneficial in small amounts, excessive intake either through supplements or environmental exposure can be toxic.

Maintaining a balanced diet rich in fruits, vegetables, whole grains, and lean proteins typically provides sufficient amounts of these essential metals. Understanding their role highlights the intricate connection between nutrition, chemistry, and overall health.

What the role of iron is in the human body as described in the passage?

	It strengthens bones and teeth

	It supports muscle relaxation
	It protects cells from damage
	It helps in the formation of hemoglobin which transports oxygen

Q.No: 20 Rearrange the following sentence parts to form a meaningful and grammatically correct paragraph:
